DIGITAL LITERACY – PROJECT REPORT

Name : RAGHUL.S.K

Registration number : 25BAI10288

Branch : B.Tech CSE (AI & ML)

Year : 2025 - 2029

Course : Digital Literacy

Course code : CSE 0001

Date : 23/03/2026

DIGITAL LITERACY – PROJECT REPORT

SCENARIO :

You have just been selected as a Student Digital Ambassador at your college. Your role is to help your peers navigate the digital world — from creating professional online profiles, to communicating safely and responsibly online. Your first assignment is to build a Digital Literacy Portfolio that you will present to the faculty committee and share with your batch.

INTRODUCTION : Empowering Digital Generation

As the newly appointed Student Digital Ambassador, my goal is to close the gap between fundamental technology use and thorough digital fluency. The ability to navigate online spaces with professionalism, safety, and technical proficiency is now a fundamental requirement for success in a time when a student's "Digital footprint" is just as important as their academic transcript. This project functions as a thorough Digital Literacy Portfolio, intended to show mastery of the skills and behaviours required for the contemporary workplace.

OVERVIEW OF THE PROJECT :

Each of the five strategic tasks in this portfolio focuses on a fundamental aspect of digital citizenship. It serves as a roadmap for my peers to follow as well as a personal showcase.

DIGITAL LITERACY – PROJECT REPORT

The project is organized as follows:

- **Creative Communication**: Using excellent infographics to make difficult digital subjects easier to understand.
- **Technical Presence**: Making a good first impression on potential employers by developing a professional identity through digital portfolio platforms and a thoroughly documented GitHub README.
- **Solving problems**: Using structured Google Forms for data collection and coding challenges to show logical reasoning.
- **Professional Etiquette**: Improving email correspondence and tone to guarantee accountable and successful business and academic exchanges.
- **Safety & Ethics**: Examining case studies of cybercrime to encourage a culture of security and watchful online conduct.

This portfolio attempts to establish a gold standard for digital literacy within our college community by combining these technical skills with critical reflections, creating a more secure, professional, and welcoming environment for each and every student. Through this initiative, we are developing a sustainable culture of digital responsibility and innovation rather than just learning how to use tools. This will enable my peers to confidently and ethically navigate the complexities of today's workforce.

DIGITAL LITERACY – PROJECT REPORT

TASK 1 : Creating an infographic

I picked **Prezi** Design for the first part of my digital literacy portfolio because it lets you make these cool layouts that actually move around a bit. It seems like static stuff just does not grab attention from other students as much.

The infographic I put together kind of follows this path, like a journey through the main parts of digital citizenship. There are five pillars or whatever you call them. It starts off by explaining digital literacy as this thinking skill you need for everything online. Then it moves into the practical bits, showing tools students use every day and how to stay safe on the internet without getting into trouble.

I think the visual stuff came out okay with those deep blue colours and some brighter ones to pop. Added simple icons too so it is not overwhelming. The whole thing ends up talking about the more professional angle, like how your online presence matters and basic email rules that make you look good.

Condensing all that info was the hardest part for me. Take cybersecurity, for example. Trying to fit it into just a few short points that actually help without skipping the big ideas felt impossible sometimes. It is interesting how that challenge made me rethink what really counts. And organising these properly inside the infographic was another challenging task I had to overcome.

DIGITAL LITERACY – PROJECT REPORT

TASK 2 : BYO Student Portfolio

I will establish my professional presence for the next four years through **LinkedIn, GitHub, and Kaggle** as my main platforms to achieve visibility and professional growth. My student and professional development journey require three distinct platforms to function as a complete academic and technical development portfolio.

My professional base of operations will be established through **LinkedIn**. The platform serves as the top venue for professionals to connect with others while building their professional identity and engaging with industry professionals. I will use LinkedIn to record my career achievements and post my academic work and connect with professionals.

GitHub is where I will host the "engine room" of my academic work. The version-control platform enables me to demonstrate both my coding skills and my ability to work with others. I will develop a regular commit pattern which will enable me to convert my classwork into open-source projects that show my capacity to produce organized and practical software.

Kaggle will function as my main platform for applying theoretical knowledge. I will participate in data science competitions and analyse various datasets to demonstrate my ability to perform analytical tasks which extend beyond my academic studies. The platforms will display my ongoing work which I will update regularly to prepare for my upcoming transition into professional life.

DIGITAL LITERACY – PROJECT REPORT

TASK 3 : Exploring coding platforms

The third phase of my ambassadorship I conducted through two technical solutions which I demonstrated through HackerRank and Google Forms to test my batchmates knowledge on Digital literacy. The core of this task involved rigorous practice on HackerRank, where I successfully earned a Problem-Solving badge. My achievement shows I can solve difficult algorithm problems through my technical determination and my ability to think logically.

What was Built and Practiced: On HackerRank, I focused on modular coding and efficient debugging to secure my badge, proving my readiness for advanced technical roles. I created an interactive Digital Literacy Quiz through Google Forms on Digital literacy. The assessment required my peers to demonstrate their knowledge of online safety and knowledge about world of internet through its high-quality assessment design. An Infographic, I created using Prezi earlier served as an information tree for the batchmates.

Academic Benefits: These tools are transformative for my academic journey. The Problem-Solving badge establishes my professional skill level through a standard assessment which helps me secure internships. My knowledge of Google Forms and Slides enables me to perform advanced primary research while presenting data results in an understandable format. The platforms enable me to manage difficult academic tasks at the level which Student Digital Ambassadors need to demonstrate.

DIGITAL LITERACY – PROJECT REPORT

TASK 4 : E-mail etiquette

4-B. Social media Do's and Don'ts's Checklist :

1. **Do's :**
    - **Curate a Professional Image**: Use a professional image for platforms like LinkedIn so that you can be easily identified.
    - **Network with Intent**: Follow influencers in your field of interest, connect with people in professional groups related to your major, and share articles related to your desired profession.
    - **Showcase Your Projects**: Use your social media platforms to share "wins" like a successful capstone project, a volunteer event you organized, or a certification you received.
    - **Verify Before You Share**: Verify the articles or news you share so that you contribute to a well-informed online community.
    - **Be Aware of Privacy**: Keep your private social media accounts like Instagram or TikTok private and approve follow requests manually so that your private life is separate from your professional life.

DIGITAL LITERACY – PROJECT REPORT

2. Don’ts’s :

- **Don't Post Under Stress**: Try not to vent about a difficult professor, a low grade, or a frustrating internship experience, as it may be seen as a lack of professionalism or stress tolerance.
- **Don't Overshare Personal Details**: Try not to post details about your specific dorm location, class schedule, or birth year, as it may create problems related to privacy and safety.
- **Don't Forget the 'Screenshot Rule'**: Always remember that you never know when your post will be screenshot and forwarded to a potential employer or even the university dean, as nothing is ever truly deleted on the internet.
- **Don't Engage in Online Conflict**: Try not to get involved in any online conflict or 'war,' as it may be seen as a form of harassment or poor judgment on your part.
- **Don't Neglect Your Digital Footprint**: Remember that even though you may not have used social media recently, your older posts may still be visible to others and need to be cleaned up to ensure you're no longer associated with them.

DIGITAL LITERACY – PROJECT REPORT

A Situation where poor digital communication caused a real problem :

A quintessential case of digital communication breakdown can be illustrated by a scenario of a 'Reply All' fiasco in a professional or academic setting. Let us consider a hypothetical case where a student, upset over a grade received on a group project, sends an impassioned email to their group members. In their venting of anger and frustration, they end up using unprofessional language and accuse a member of their group for their 'fail' grade. However, in their haste to vent their anger, they end up 'Reply All' instead of 'Reply,' thereby sending an email to their professor and the departmental head.

The immediate consequence of this fiasco could be a reprimand for violating the student code of conduct and a permanent strain on professional relationships. This could have been averted if digital pause had been applied here. Instead of sending off an email in anger and frustration, it would have been better to wait 24 hours and communicate their grievances to their group members in a meeting or via an email that focuses on 'I' statements and group project statistics rather than making a personal attack on a member of their group.

DIGITAL LITERACY – PROJECT REPORT

TASK 5 : Cyber-Crime and Case study

What I think caught me off guard the most was the fact that digital literacy is not just about proficiency in digital tools. It is about creating a conscious and complex professional identity. I thought of LinkedIn, GitHub, and Kaggle as different mediums to help with job searching. What was surprising was how these platforms connect to one another to present a cohesive narrative about my academic development over the next four years. What caught me off guard the most was the level to which "digital etiquette," such as email formatting and bio information, plays a role in establishing credibility even before a face-to-face meeting. It made the abstract concept of "digital footprint" tangible.

As a result, I am making a personal commitment to alter how I interact with digital platforms. I am no longer just a consumer; I am becoming an active contributor to the digital world. Whether it is creating a GitHub project about a small coding project or updating my information on Kaggle based on new skills learned, I now realize that having a digital presence is about active maintenance.

CONCLUSION :

As I bring this Digital Literacy Project to a close, it has become evident that being a Student Digital Ambassador is not just about learning software skills, but developing a state of mind that is adaptable and responsible. This Digital Literacy Project has provided me with a rich learning experience, taking me through a complete process from the creative visualization of

information as presented in Module 1, through the rigorous technical validation of a HackerRank Problem Solving badge as presented in Module 3. By combining these skills with a deep appreciation of professional online presence and email etiquette, I have created a base that will allow me to proudly represent our college with digital integrity.

The richness of this portfolio, which ranges from the collaborative potential of Google Workspace to the need for security awareness to combat cybercrimes, is a testament to the multifaceted nature of literacy. I have come to realize that my professional profile on GitHub or LinkedIn is only as secure as my security awareness and as effective as my communication. Going forward, I am committed to helping my peers make sense of financial fraud, professional branding, and collaborative work using these insights. This portfolio is not only a culmination of my learning objectives; it is a living blueprint to academic success and professional preparedness. It is the beginning of my role as a facilitator to create a safe, innovative, and digitally savvy community for all students.
